

Single Cell Mass Cytometry

Helios™, a CyTOF system

Thursday, March 9th, 2017

1:30pm – 2:30pm

St. Michael's Hospital

LKSKI Auditorium

(209 Victoria St, Toronto, ON M5B 1T8)

Presenter: Michelle Poulin, Ph.D, Sr. Application Scientist

The Helios™ mass cytometer allows analysis of more than **40 probes simultaneously on a single cell basis**, thereby providing researchers with an unparalleled ability to discover new biology as well as perform deep phenotypic and functional profiling. Groundbreaking research has been made possible with mass cytometry in multiple disciplines including translational medicine and clinical studies.

Please let us share with you knowledge on how The Helios™ mass cytometer can positively impact your research

Please RSVP with Zeeshan.Farooq@Fluidigm.com
